In the News

- 20.11.2020: [WireGuard vs OpenVPN](#)
 - “WireGuard outperformed OpenVPN by an incredible 230%”

- 19.11.2020: [Transitioning from Docker to Podman](#)
 - alias docker=podman
 - podman on [Ubuntu](#)

- 18.11.2020: [OpenWrt and self-signed certificates](#)
 - TLS with router admin page, Lets Encrypt – not easy
- 21.11.2020: [\\$pickle in a pickle as attacker swipes \\$20 million in “evil jar” exploit](#)
 - “Each PickleJar employs a Strategy contract to earn yield for its depositors. In this document, we explore the types of Strategies being employed and how these work under the hood.” [\[source\]](#)
 - “It appears to be a bug related to Pickle’s Swap Jar functionality, which allows yield farming strategies to be swapped. The issue was that there apparently was no check to ensure that the Jar the funds were being swapped into was not malicious.” [\[source\]](#)
